

REDUCE THE RISK OF NOROVIRUS THIS WINTER

What is norovirus?

Norovirus is a virus that causes gastroenteritis (stomach bug).

Noroviruses are a group of viruses that are the most common cause of stomach bugs. They are also known as 'winter vomiting viruses', 'small round structured viruses' or 'Norwalk-like viruses'.

How do people get norovirus?

Norovirus is passed from one person to another by contact with an infected person; by consuming contaminated food and water or by contact with contaminated surfaces or objects.

Norovirus often causes outbreaks because it is easily spread from one person to another and the virus is able to survive in the environment for many days.

Who is most at risk?

There is no specific group who are at risk of contracting norovirus - it affects people of all ages.

How can the spread of norovirus be prevented?

Careful hand hygiene and the use of surface sanitizers will greatly reduce the spread of norovirus.

BROAD SPECTRUM SANITIZER

An odourless non-tainting skin and surface sanitizer designed for frequent use.

Contains the powerful but safe and nontoxic biocidal preparation Sterizar.

Ideal for use on skin when entering food production areas, or before handling food.

Non fragranced and food safe making it perfect for use on a variety of surfaces.

- Complies with BSEN13697 killing 99.99% Escherichia coli and Methicillin resistant Staphylococcus aureus germs in 30 seconds.
- Complies with BSEN1276, BSEN1275 Fungicidal Activity, BSEN1656 Chemical Disinfectant used in Veterinary Area, BSEN14348 Mycobacterium in Medical Area, passes BSEN1500 Hygienic Hand Rub test.
- Effective against, Norovirus, MRSA, E-coli, Legionella and Clostridium Difcile, Salmonella and Listeria.
- Has a residual biocidal activity still killing 99% bacteria after 6 hours use on hands. Passes skin sensitivity test showing no effects after 24 hour skin contact.
